

Executive Summary

BodhX is an AI-driven customer-engagement platform that **fully integrates WhatsApp** (official Business API) into a shared inbox and built-in CRM [34†L403-L406] [13†L55-L63] . Its AI “agents” automatically capture leads from chats, update pipeline stages, schedule follow-ups, and even handle broadcast campaigns with pre-approved WhatsApp templates. Setup is guided via the web dashboard: you connect a verified WhatsApp Business number through BodhX’s “Channels” → WhatsApp flow [33†L55-L63]

[13†L62-L68] . The platform is credit-based (120 free credits per month in the Free plan, 5,000 in Pro, etc. – see **Pricing** below) and **does not charge per feature**. WhatsApp message fees (per Meta’s rates) are billed separately [15†L64-L68] . BodhX’s data flows through its cloud servers (storing conversation and lead data per its Privacy Policy) and can sync to Google Workspace or custom APIs [34†L373-L380]

[20†L22-L28] . Overall, BodhX **provides comprehensive WhatsApp CRM support** – including multi-agent inboxes, lead capture, message templates, automation, and analytics – all via official WhatsApp Business API integration. (External CRM sync is not explicitly listed; if needed, BodhX can call external APIs from chat [34†L373-L380] .)

Key findings: BodhX requires the WhatsApp Business API for production use; it offers an “experimental” QR-based device link only for testing [13†L55-L63] . It supports multiple WhatsApp numbers (3 in Free, 10 in Pro, 30 in Growth [15†L17-L25]) and **multi-agent routing from one number** [15†L25-L28] . Agents run 24/7 on WhatsApp and/or a website widget, and team members use the BodhX web inbox or even WhatsApp itself to update leads [23†L55-L58] [34†L403-L406] . Broadcast campaigns use WhatsApp’s template messaging and a separate “broadcast wallet” to track costs [24†L55-L63] [15†L64-L68] . BodhX’s privacy policy notes data is collected and processed (including full message text) to power the AI and CRM, with data hosted (in India and elsewhere) under standard security measures [20†L39-L42] [20†L54-L59] .

In the sections below we detail BodhX’s CRM features, WhatsApp integration (channels, setup, accounts, APIs), pricing/limits, data flow/security, supported workflows, and limitations. We conclude with a feature-comparison table and step-by-step setup guide.

Product Features & CRM Capabilities

- **Unified Inbox & AI Agents:** BodhX provides a single web-based inbox where WhatsApp chats (and other channels) appear with full context [34†L403-L406] . Specialized AI agents (Sales, Support, Booking, Follow-up, Founder assistant) can answer or triage queries 24/7 [34†L403-L406] [33†L55-L63] . Agents are built via a guided “agent builder” UI that asks about your business and tone (see figure below) [35†] .
- **Built-in CRM:** Conversations automatically create and update leads. BodhX’s CRM uses a **dynamic schema** – you define fields and pipeline stages – and it auto-captures leads when intent is detected [22†L53-L61] . For example, an AI agent will “capture a lead with interest, priority, and source” without manual entry [22†L53-L61] . Each lead gets a unique ID and status (New → Contacted →

Qualified → Won/Lost) [22†L59-L63] . You can filter/search leads, import/export CSV contacts or leads, and tag sources [22†L59-L63] . Lead assignment rules can route new leads to sales reps.

- **Lead Capture & Assignment:** BodhX “captures” leads directly from chats and logs them in the CRM [5†L45-L53] [23†L55-L58] . You configure lead-assignment rules (round-robin, priority, etc.) so incoming leads go to the right person [23†L62-L65] . When a lead is assigned, BodhX can send follow-up reminders to reps. Crucially, **salespeople update leads via WhatsApp or the web UI** – e.g. a salesperson can reply in plain language on WhatsApp and BodhX parses it to update the CRM [23†L55-L58] . This means the sales team doesn’t need a new app.
- **Automation & Follow-ups:** BodhX has a **Follow-up Agent** that periodically nudges quiet leads to keep deals moving [23†L55-L58] . Automated reminders (e.g. “did you get my proposal?”) are sent until a customer responds. The platform also supports logic branches and “intelligence” layers (AI models) to handle complex dialogs, with each reply consuming credits [15†L56-L64] . Human agents can always take over (handoff) when needed [15†L37-L38] .
- **Broadcasts & Campaigns:** BodhX lets you send templated WhatsApp campaigns to customer segments [24†L55-L63] . Only **pre-approved message templates** (from WhatsApp) can be used [13†L74-L78] . In the BodhX UI you pick a template and audience, and the system shows the estimated cost (messages draw from a separate broadcast credit wallet) [24†L55-L63] . You then send and track deliveries, replies, and failures per recipient. BodhX enforces compliance tips (DND hours, opt-in) [24†L61-L70] . The free plan allows up to 200 broadcast messages; paid plans are unlimited [15†L31-L33] .
- **Integrations:** BodhX can call external APIs during a conversation [34†L373-L374] . Native connectors include Google Workspace (Sheets, Calendar, Gmail, etc.) [34†L384-L390] , and on paid plans you can add any HTTP API [21†L53-L60] . For example, an AI agent can look up a customer’s order or create a calendar event on the fly. (Support for other CRMs like Salesforce/HubSpot isn’t mentioned; one could potentially connect them via the custom API tools.)

[35†embed_image] *BodhX’s guided “agent builder” UI (left) and agent configuration form (right). Users enter business details and choose agent roles (Sales, Support, etc.), after which BodhX writes initial instructions and connects channels [33†L55-L63] .*

WhatsApp Integration & Channels

- **Official WhatsApp Business API (Recommended):** BodhX **requires the official WhatsApp Business API** for production use [13†L55-L63] [10†L435-L439] . This ensures full compliance and reliability. BodhX itself handles the complex setup (business verification, webhooks, etc.), so you “just connect your business number” through their guided flow [10†L435-L439] [13†L62-L68] . Once the number is verified, chats will flow into the BodhX inbox automatically. BodhX does not support using the consumer WhatsApp or any unauthorized method for live customer chats.
- **WhatsApp Business App (QR/Device Link):** BodhX offers an **experimental QR-code/device link mode** (using WhatsApp Business App) for quick tests [13†L55-L63] . This is *not* recommended for real operations. It allows you to scan a code from your phone and route messages through BodhX, but it has stability and volume limits. BodhX’s documentation explicitly warns this method is “not for production volume” [13†L55-L63] .
- **WhatsApp Cloud API:** While BodhX doesn’t spell out “Cloud API,” its use of the official API implies it supports Meta’s Cloud API endpoint. In practice, you will likely provision a WhatsApp Business account in Facebook/Meta’s dashboard (or via a BSP) and link it in BodhX’s setup. The key point is

BodhX does **not** rely on the legacy on-device app alone; it integrates directly with Meta's infrastructure.

- **Other Channels:** Currently, BodhX supports **WhatsApp and a website chat widget** [34†L403-L406] . Instagram DMs and Meta Pages are “coming soon” [34†L388-L393] . (Voice channels are on the roadmap [15†L64-L68] but not live.) All channels converge into the same CRM and inbox, so the same lead appears no matter how the customer contacts you [34†L403-L406] .

Accounts, Credentials & Setup Steps

Required Accounts: To use BodhX with WhatsApp, you need a **WhatsApp Business Account** (with a verified phone number) in Facebook's system. BodhX handles the API integration, but you must supply a business number. You also need a BodhX account/workspace (start with the free trial, no credit card). BodhX's FAQs and guide say setup is non-technical and can be done in ~1 day [10†L451-L455] .

Setup Steps: BodhX provides a step-by-step wizard. A typical flow is: 1. **Create workspace and agent:** In the BodhX dashboard, use the Agent Builder (VIBE) to describe your business and choose an agent type (Sales, Support, etc.) [33†L55-L63] . Add your FAQ or product data via website crawling or document upload so the AI has knowledge.

2. **Connect WhatsApp:** Go to *Channels* → *WhatsApp* and click “Connect Number”. Follow the guided process to register your WhatsApp Business API number. This involves verifying your phone number in Meta's portal and assigning it to an agent. BodhX will show a “webhook status” – make sure it does not stay “never connected”. Once done, send a test message to confirm replies show up [13†L62-L68] .

3. **Configure CRM & Leads:** Define your lead/contact schema and pipeline fields in BodhX's CRM settings. Imported contacts (via CSV) can be tagged by source. BodhX will now auto-capture leads from chats according to your defined triggers [22†L53-L61] . Set custom fields or tags as needed.

4. **Set Up Team & Follow-ups:** Add your sales/support team under *Team & Permissions*. Define lead-assignment rules (round-robin, priority, etc.) and adjust follow-up reminder timing/messages [23†L62-L65] . BodhX will automatically route new leads to reps and send WhatsApp reminders as configured. Ensure each rep's permissions only allow their own leads.

5. **Templates & Broadcasts:** Under *Messages* → *Templates*, create or import WhatsApp message templates for outbound use (e.g. offers, notifications). Submit them for Meta approval (required). To send campaigns, go to *Broadcast*, select a contact segment and an approved template, review cost, and send [24†L55-L63] . Monitor delivery and replies in BodhX.

6. **Test & Go Live:** Use the “Playground” in BodhX to ask the agent sample questions. Adjust instructions or knowledge if needed before talking to real customers [33†L61-L63] . When ready, simply keep the WhatsApp channel active – BodhX will respond automatically. Humans can intervene via the shared inbox at any time.

Each of these steps is documented in BodhX's guides [33†L55-L63] [13†L62-L68] [22†L53-L61]

[23†L62-L65] [24†L55-L63] . In practice, the entire onboarding (account creation through a working chat agent) can take just an afternoon [10†L451-L455] .

Pricing and Limits

BodhX uses a **credit-based pricing model** with clear tiers 【15†L17-L25】. One credit $\approx$ ₹1.5 and covers one AI reply. The main plans (prices in INR/month) are:

- **Free Plan (₹0):** 120 credits/month; 1 AI agent; supports WhatsApp + website chat; up to **3 WhatsApp numbers** (accounts); **50 leads/customers**; Broadcast limit 200 messages 【19†L329-L337】 【15†L25-L33】. This plan is very limited in credits but allows basic testing. (Meta's WhatsApp message fees still apply even on Free.)
- **Pro Plan (₹5,000):** 5,000 credits/month; up to 10 AI agents (5 users); up to 10 WhatsApp numbers; **5,000 leads**; unlimited broadcast; includes auto follow-up and any 5 third-party integrations; 50 MB knowledge base/agent 【15†L17-L25】 【15†L30-L33】. Suitable for growing businesses.
- **Growth Plan (₹15,000):** 15,000 credits/month; up to 30 AI agents (20 users); up to 30 WhatsApp numbers; **unlimited leads**; unlimited broadcast; all integrations; advanced analytics; 500 MB memory/agent 【15†L17-L25】 【15†L30-L33】.
- **Custom Enterprise:** Contact BodhX. (Supports unlimited agents and custom credits.)

Credits Usage: Sending messages manually (text, media) uses 0 credits. When the AI replies with text or simple action, it costs 1 credit 【15†L56-L64】. Richer processing (reading customer media, voice) costs 3; generating or editing images costs 10. (Voice calls are a planned feature.) Crucially, **WhatsApp's own API message fees are extra**. BodhX notes: *"WhatsApp message charges (Meta) billed separately at cost"* 【15†L64-L68】. In other words, your WhatsApp Business account still incurs Meta's per-message rates in addition to BodhX credits.

Key Limits by Plan (from the official table 【15†L17-L25】 【15†L30-L33】):

- WhatsApp/Website channels are included on all plans. (Instagram support is "soon" 【34†L388-L392】.)
- Multiple numbers: 3 (Free), 10 (Pro), 30 (Growth) WhatsApp accounts can be connected 【15†L23-L28】. BodhX allows **one WhatsApp number to feed multiple AI agents** (with separate inboxes) 【15†L25-L28】.
- AI agents/users: 1/1 (Free), 10/5 (Pro), 30/20 (Growth) 【15†L21-L22】.
- Leads/Customers stored: 50 (Free), 5,000 (Pro), unlimited (Growth) 【15†L30-L33】.
- Contacts/inbox messages: unlimited on all plans 【15†L29-L33】.
- Broadcasts: 200 messages on Free; unlimited on paid plans 【15†L31-L33】.
- Integrations: None on Free; any 5 (Pro); all+custom (Growth) 【15†L39-L42】.
- Memory per agent: very limited on Free (3 MB) 【15†L29-L33】, more on paid.

These pricing details are cited from BodhX's pricing page 【15†L17-L25】 【15†L30-L33】. BodhX emphasizes "no hidden charges" – everything is included in credits except Meta's fees. The 7-day trial unlocks Growth features with 120 free credits (no card needed).

API, Webhooks & Data Flow

BodhX acts as the **middleware** between WhatsApp and your business systems. Technically, BodhX runs a webhook endpoint that receives messages from Meta's WhatsApp API. The key data flows are:

flowchart LR

```
A[Customer on WhatsApp] -->|Message via WhatsApp API| B[BodhX Platform]
B -->|AI processes text| B
B -->|Log lead/contact| C[CRM/Database]
B -->|Send reply via API| A
B -->|Notify human agent| D[Team Inbox (Web UI)]
D -->|Human reply or update| B
B -->|Call external API| E[External Tools (e.g. Sheets, APIs)]
E -->|Data returned| B
```

This diagram illustrates that a customer's WhatsApp message (A) is sent via the official Business API to BodhX (B). BodhX processes the message with its AI agents and updates its CRM database (C). If the agent replies, BodhX sends the reply back to the user via the WhatsApp API. Conversations are available to human agents in BodhX's web inbox (D), who can reply there – their messages also go through BodhX to WhatsApp. BodhX can also fetch or push data to external services (E) during conversations (via its Google Workspace and HTTP tools [34†L373-L374]).

Security & Privacy: According to BodhX's Privacy Policy, messages and customer data are collected, processed, and stored to run the service [20†L10-L18] [20†L39-L42] . BodhX uses "reasonable security measures" to protect data [20†L54-L58] , and data may be hosted in India or other jurisdictions [20†L60-L64] . All conversation text, metadata, and contact info passes through BodhX's servers (since it powers the AI), so end-to-end encryption ends at BodhX. The policy notes BodhX does *not* sell personal data [20†L44-L50] . You retain responsibility for compliance (e.g. obtaining customer consent) when using BodhX's WhatsApp CRM [20†L39-L42] . In practice, this means your WhatsApp chats will be visible to BodhX (for AI training/handling) and shared with any connected services you enable (e.g. Google Sheets [20†L22-L28]). Overall, BodhX's privacy terms are standard for cloud SaaS, with no special claims of end-to-end encryption (beyond what WhatsApp provides to BodhX via the API).

Supported CRM Workflows

BodhX covers the key WhatsApp-CRM workflows:

- **Lead Capture:** Automatic extraction of leads from chat. An AI agent detects buying signals and creates a lead record (with interest level, priority, source) [22†L53-L61] . Each lead gets a unique ID. This eliminates the need for manual lead entry.
- **Messaging Templates:** BodhX requires pre-approved WhatsApp templates for any proactive outbound messages [13†L74-L78] . You manage templates under Messages→Templates. Approved templates can be used in follow-ups and broadcasts. BodhX does not auto-generate templates – you submit the text/variable template and BodhX shows their approval status.
- **Automation:** The platform automates routine responses. The **Follow-up Agent** automatically messages prospects (e.g. "checking in on your order") and schedules reminders [23†L55-L58] . It can escalate to a human if the customer responds unexpectedly. Multi-language support is built-in [15†L37-L38] .
- **Contact Sync:** While BodhX has its own CRM database of contacts/leads, you can import existing contacts via CSV [22†L59-L63] . There is no mention of real-time sync to external CRMs; if needed,

one could use BodhX's custom API tools to push lead data to a CRM like HubSpot. (The Privacy Policy does list "CRM" under third-party integrations [20†L22-L28] , suggesting such connectors may be planned or allowed.)

- **Lead Assignment & Routing:** As noted, leads are assigned per your rules. BodhX also supports pipeline stage changes via chat (customers or staff can trigger a status change by certain keywords or button taps). Sales reps can interact via WhatsApp itself: BodhX can send notifications to reps on WhatsApp, and reps reply directly to update leads (no new app needed) [23†L55-L58] .
- **Broadcast Campaigns:** Targeted re-engagement of customers is supported. You create contact segments and send templated broadcasts [24†L55-L63] . BodhX tracks delivery/failures and handles replies. This covers typical re-engagement or promotional use cases [6†L37-L41] [24†L61-L70] .

In summary, BodhX covers most WhatsApp CRM features natively: lead capture, pipeline tracking, templated messaging, auto follow-ups, broadcasts, and analytics. Its main limitation is that "CRM" is its own module; if you already use a separate CRM, you must integrate manually.

Supported Platforms

BodhX is primarily **web-based**. Agents and team members use the BodhX web interface on desktop or mobile browsers. Customers use WhatsApp (mobile app) or a website chat widget to interact. There is no mention of a dedicated BodhX mobile app – instead, the multi-device capability (WhatsApp API) and mobile-friendly web UI serve those needs. Notably, sales reps can also use *their own WhatsApp* (registered on the BodhX number via multi-device) to reply to customers, per the Sales Follow-up guide [23†L55-L58] . Thus, user platforms are:

- **Web Browser (Desktop/Mobile):** BodhX dashboard and inbox, agent builder, CRM, etc.
- **WhatsApp (Mobile App):** For customers (and optionally for team members to receive notifications or handoff chats).

Other channels: BodhX also supports a **website chat widget** (embedded on your site) [34†L376-L384] . Instagram DMs and Meta (Facebook) chat are "coming soon" [34†L388-L392] .

Limitations and Caveats

- **WhatsApp Business API Only:** BodhX requires the Business API; you cannot use the standard WhatsApp or rely on consumer apps in production [13†L55-L63] . The "experimental" QR link should not be used for real customers.
- **Meta/WhatsApp Approval:** Messages require Meta approval. If your templates or phone number aren't approved, broadcasts will fail. BodhX warns high failure rates if templates/numbers are unverified [24†L61-L70] .
- **Credit Consumption:** AI usage can burn credits quickly if conversation volume is high. Monitor the **credit dashboard**. (You can top-up credits anytime [15†L48-L54] .)
- **Message Fees:** WhatsApp message fees (per-GB or per-message) are extra. Especially for media or international numbers, plan for these costs.
- **No Public API Yet:** BodhX does *not* currently expose its own webhook/API for external systems to retrieve messages or leads. The roadmap lists an "API" as "soon" [15†L64-L68] . For now, integration to other systems must use BodhX's **custom HTTP tool** inside a conversation or CSV export.

- **Data Residency:** Data is likely hosted in India (BodhX appears India-based), which may matter for some customers. The Privacy Policy confirms data may be stored/processed in India 【20†L60-L64】 .
- **Feature Gaps:** As of now, BodhX does not list native connectors to major CRMs (Salesforce, HubSpot). If you rely on those, you must build them via their API tools or await future integration options. (The policy's mention of "CRM" integration suggests it might come.)
- **Usage Limits:** The Free plan's limits (50 leads, 200 broadcasts, 120 credits) are quite low. Ensure to upgrade if you exceed these.

BodhX vs. Typical WhatsApp CRM – Feature Comparison

Feature / Capability	BodhX AI (This Research)	Typical WhatsApp CRM (Industry norm)
WhatsApp API Integration	Official Business API (WhatsApp Cloud/Business API). BodhX <i>handles</i> setup; user just connects their number 【13†L55-L63】 【10†L435-L439】 . Requires business verification.	Most require official API too; some allow QR/"App" based connections. Leading platforms (WATI, Callbell, Interakt) use API for reliability.
Channels	WhatsApp and website chat supported today 【34†L403-L406】 ; Instagram (DMs) coming soon. All channels funnel into one CRM and inbox 【34†L403-L406】 .	Many CRM tools focus on WhatsApp alone; top platforms often add Facebook Messenger or Instagram. Unified inbox is common.
Shared Inbox / Team	Multi-agent support: one WhatsApp number can feed multiple agents/inboxes 【15†L25-L28】 . Per-agent inbox is supported 【15†L25-L28】 . Teams collaborate in shared inbox.	Shared inbox with multi-users is standard. Some tools limit to one device (free apps); enterprise solutions all allow many.
Built-in CRM	Yes – BodhX has its own CRM. Leads auto-captured from chats 【22†L53-L61】 , with custom fields/pipeline you define. Statuses auto-sync from conversations.	Varies: Some like Callbell or WATI have basic contact lists/pipelines; others integrate with full CRMs (e.g. HubSpot connector).
Lead Capture & Sync	Automatic lead creation with IDs, source, and priority 【22†L53-L61】 . Duplicate detection and CSV import/export available 【5†L45-L53】 【22†L59-L63】 .	Typical CRMs either rely on manual entry or have chat-to-lead bots; some can auto-create leads via chat. API sync often needed.
Messaging Templates	Supports WhatsApp templates for outbound. Create in BodhX (Messages→Templates) and submit to Meta 【13†L74-L78】 .	All WhatsApp CRMs use templates (required by Meta). Usually built/approved externally or via UI.

Feature / Capability	BodhX AI (This Research)	Typical WhatsApp CRM (Industry norm)
Broadcasts / Campaigns	Yes – templated campaigns with contact segmentation [24†L55-L63] . Separate “broadcast wallet” (in currency) manages cost [24†L61-L70] . Tracks delivery per contact.	Broadly offered. Broadcast volumes often limited by plan or channel quality. Cost tracking varies by platform.
Automation / Bots	Advanced AI agents for sales/support – can answer FAQs, qualify leads, etc. Follow-up automations built-in [23†L55-L58] . Multi-language supported [15†L37-L38] .	Many CRMs include chatbot builders or rule-based bots (e.g. WATI, Callbell). AI-driven agents are less common in SMB tools.
Pricing Model	Credit-based (AI replies cost credits). Free tier available. Meta’s per-message fees are extra [15†L64-L68] .	Typically per-user or flat-monthly plans plus WhatsApp fees. Some add markups; others (like BodhX) say they do not.
API / Extensibility	No public user API yet (roadmap soon [15†L64-L68]). Supports Google Sheets & custom HTTP calls from chat [34†L373-L380] .	Most have APIs/webhooks for integration (e.g. Respond.io, Freshchat). Some smaller tools lack robust APIs.
Mobile Support	Web dashboard for agents. No standalone mobile app. Agents can use WhatsApp itself for quick updates [23†L55-L58] .	Usually web UIs; some have mobile apps or support. Customers always use WhatsApp app.
Data & Security	Data processed on BodhX servers (India). Standard cloud security. Privacy policy forbids selling data [20†L44-L50] . End-to-end encryption ends at BodhX.	All API-based CRMs have similar flow (data via server). Security depends on vendor; official API means business compliance.
Setup Complexity	Guided setup wizard (agent builder, channel connection). Non-technical; ~1 afternoon setup claimed [33†L55-L63] [10†L451-L455] . No coding required.	Some tools handle WhatsApp onboarding for you (e.g. BSPs like 360dialog). Others provide docs. Varies, but most aim for no-code setup.

Table: BodhX’s WhatsApp CRM features (left) vs. typical WhatsApp-first CRM tools (right). BodhX aligns with enterprise-level features (AI agents, pipeline), while many basic WhatsApp CRMs focus on chat and contact list.

Next Steps & Recommendations

Since BodhX **does support WhatsApp CRM out of the box**, the next steps are to: (a) **Try the free tier** – sign up at bodhx.ai and follow the quickstart guide [33†L55-L63] ; (b) **Connect your WhatsApp Business number** as described above and test chat flows; (c) **Prepare WhatsApp templates** for any outbound use

and submit them for approval 【13†L74-L78】 ; (d) **Import your contacts** and experiment with lead assignment rules in the CRM. Use the trial period to gauge credit usage and feature fit.

If any requirements are unclear (for example, integration with an external CRM or advanced API), we recommend contacting BodhX support or requesting a demo. BodhX's documentation suggests an API and more connectors are "coming soon" 【15†L64-L68】 【20†L22-L28】 , so you may confirm roadmap timing. If BodhX did not meet a specific need (e.g. GDPR data residency, custom integrations), then consider alternatives listed in industry reviews 【29†L60-L64】 【10†L467-L472】 . For example, a platform like Respond.io or a traditional CRM with a WhatsApp connector might be compared. However, for an AI-powered end-to-end WhatsApp pipeline as described, BodhX appears to be a feature-rich solution.

Assumptions & Unanswered Questions

- **Cloud vs. On-Prem API:** BodhX cites "official WhatsApp Business API" but does not explicitly say if it uses Meta's Cloud API or requires on-premise setup. We assume it uses the Cloud API or a BSP under the hood, since setup is fully guided.
- **External CRM Integration:** The docs do not list native connectors to external CRMs (HubSpot, Salesforce, etc.). We assume this must be done via BodhX's HTTP tools or CSV exports. It's possible future integrations will be added.
- **Data Handling Details:** Beyond the privacy policy, specifics of encryption at rest or certifications (e.g. ISO) are not provided. We assume BodhX uses standard cloud security measures 【20†L54-L58】 .
- **Mobile Agent Experience:** No mobile app is mentioned. We assume agents use the web interface, possibly on mobile browsers. BodhX did note that sales reps can reply on WhatsApp itself 【23†L55-L58】 , which implies multi-device login.
- **Limits Enforcement:** The docs mention "fair-use limits" on the Free plan 【15†L64-L68】 but do not detail them. We assume extremely high usage may be throttled on Free.
- **Unanswered:** We did not find public info on BodhX's actual API endpoints or webhook URLs (for example, to pull conversation logs). We note that an official API is "roadmap" 【15†L64-L68】 , so none is currently documented.

In summary, **BodhX clearly supports WhatsApp CRM** via its integrated platform. We based this report on BodhX's official site and guides 【13†L55-L63】 【22†L53-L61】 【15†L17-L25】 and credible third-party summaries 【10†L435-L439】 【15†L64-L68】 . No evidence was found that BodhX lacks core WhatsApp or CRM features; in fact, it offers more (AI chat, follow-ups) than a typical WhatsApp CRM. The remaining questions primarily concern integrations and data policies, which BodhX should clarify with customers.
